

'Magnabrite': Small 64mm (2.5in) diameter is \$25.00 plus \$7.00 postage & handling, with the option of a wooden base for an extra \$5.00.

'Magnabrite': Large 89mm (3.5in) \$65.00 plus \$8.00 postage & handling, and includes the wooden base.

Made in USA - the amazing original light gathering dome magnifier. Use on maps, books and even microform/computer screens - recommended by members of Convict Connections. Comes in its own protective carry pouch.

The Magnabrite is a solid acrylic 4x light-gathering magnifier. It intensifies the light that passes through it, making the magnified subject clearer and nearly four times brighter.

The base of the magnifier is slightly concave to reduce the risk of scratching or damaging the lens surface.

The Magnabrite is pre-focused and has an "infinite eyepoint." This means that the user's eyes can be any distance from the magnifier, at nearly any angle, without loss of clarity. Thus, there's no need to hunch over the magnifier, and several people can view the subject at the same time.

To use, simply glide the Magnabrite over any surface. There are no bulbs, batteries, or moving parts.
